

Figure 6A Blue fluorescing oil (F:1), gas + oil (F:3) and oil + water (E:12) inclusions on fractures in detrital quartz. Veilfin-1, 3370-75 m ctgs sample, dark field image under UV illumination (10 μm = 7.1 mm).

Figure 6B Same subject as 6A taken in transmitted light. Note the low refractive index of the dark gas bubble in the inclusion at F:3. Inclusions containing mostly gas could either represent condensate or mixing of oil and gas.
