

PLATE 9: 2556 m

Reflected Light

This plate shows a thin 'stringer' of coal occurring in sandstone. The coal is a clarite.

Field Dimensions 0.26 mm x 0.18 mm

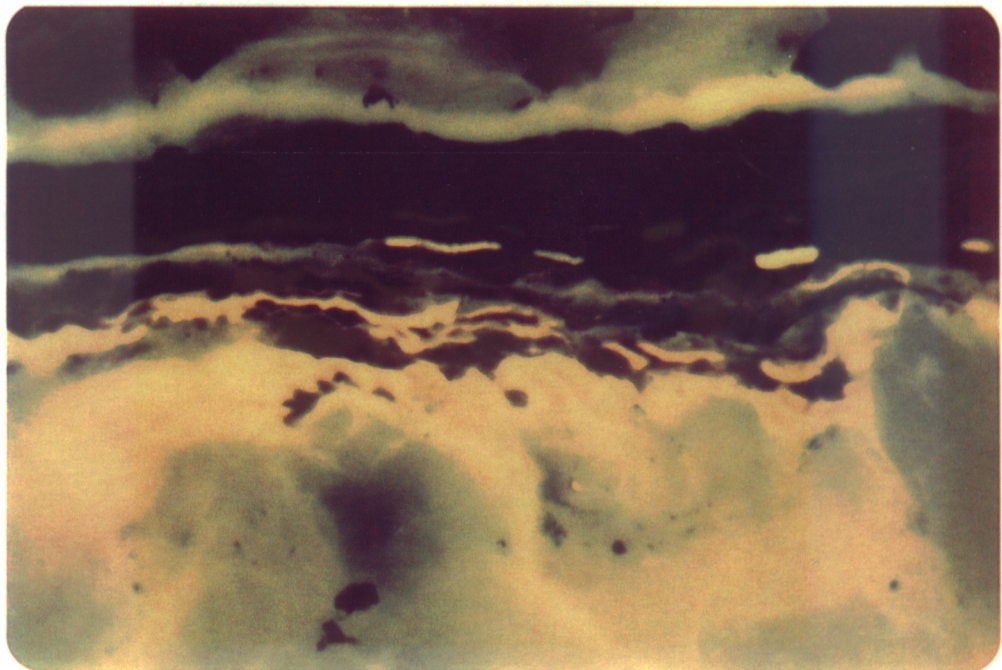

PLATE 10: 2556 m

DEPT. NAT. RES & ENV

PE906393

Fluorescence Mode

The same field as Plate 9 highlighting the exinite macerals in the coal: cutinite (moderate orange), sporinite (moderate orange) and fluorinite (bright yellow-green).
