Mr. S. Benedek,
Esso Australia Ltd.,
P.O. Box 4047.
SYDNEY N.S.W. 2001

Dear Sir,

With reference to the disagreement in Hewlett Packard pressure readings between the two gauges used on West Halibut 1, we have traced the fault to the H.P. surface processor.

As you may be aware, we have to select , for each test, slope and offset values which are applied to the frequency generated by the downhole gauge. The slope component was not always being read correctly by the H.P. surface processor. Any slope value starting with a 97 was being read as a 96 due to a defective logic circuit in the surface equipment. Thus a slope value of 96813 would be read correctly and a slope value of 97813 would be read as 96813.

As it happened, we used slope values starting with a 96 for the gauge #318 and values starting with a 97 with gauge #319. Therefore the pressures recorded with FIT #1 and all the RFT tests are correct and pressures recorded with FIT numbers 2 to 6 have to be corrected.

On the accompanying sheet we have outlined how the FIT pressures for each test may be corrected using the horner pressures as an example.

We apologise for any inconvenience caused and trust that this information will enable you to correct the anomalous pressures. The defective processor has been returned to Hewlett Packard in Melbourne for repair.

We thank you for your continued interest in our services.

Yours sincerely,
Schlumberger Seaco Inc.,

S. Briscoe
ENGINEER.

SB/ct SEA-78-201.

CORRECTION TO H.P. GAUGE #319 PRESSURES

FIT #2

Slope = 97813
offset = 443707

Formation Pressure = 3300.9

To correct the reading:

3300.9 becomes $13300.9 - 4437.07 \times 97813 \div 96813 + 4437.07$
= 13392.46

therefore correct pressure = 3392.46

FIT #4

Slope = 97758
offset = 444241

Formation Pressure = 3310.9

3310.9 becomes $13310.9 - 4442.41 \times 97758 \div 96758 + 4442.41$
= 13402.56

therefore correct pressure = 3402.56

FIT #5

Slope = 97760
offset = 444271

Formation pressure = 3262.5

3262.5 becomes $13262.5 - 4442.71 \times 97760 \div 96760 + 4442.71$
= 13353.65

therefore formation pressure = 3353.65

FIT #6

slope = 97764
offset = 444274

Formation pressure = 3273.1

3273.1 becomes $13273.1 - 4442.74 \times 97764 \div 96764 + 4442.74$
= 13364.36

therefore formation pressure = 3364.36

For each test, any pressure can be converted using the appropriate slope and offset.

For example a reading of 2000 psi on test #6 could be corrected as follows.

2000 becomes $12000 - 442.74 \times 97764 \div 96764 + 4442.74$

= 12078.10

therefore 2000 corrected = 20178.10
