Case Quote.....

The General Manager,
Frome-Broken Hill Company Pty.Ltd.,
P.O. Box 384D,
MELBOURNE. VIC.

Dear Sir,

Port Campbell No.1
Flaxman's No. 1
Ferguson's Hill No.1

Enclosed for your information are the results of
analyses, by gas chromatography, of gas samples from D.S.T.
Nos. 12 and 16 and Production Test No. 8 respectively, in the
above wells.

Yours faithfully,

A. J. Arnold

for (J. M. RAYNER)
Director

The Secretary for Mines,
Department of Mines,
Treasury Place,
MELBOURNE. VIC.

ANALYSES BY : J. PUCHEL

NOTES ON ANALYSES : See Attached Sheet

NOTES ON THE ANALYSES

1. Analysis results are given for the solutions which may contain colloidal matter but which are free from any other suspensions.
2. The sum of ions expressed in p.p.m. and m.e./l., are arithmetic totals and are not related to an overall analytical error. Uncertain concentrations of ions are excluded from the sums.
3. Soluble and insoluble solids (at given temperatures) have been determined on the oven dry basis.
4. Concentrations in m.e./l. are not given for constituents which:
 - A. Have variable and/or indefinite ionic characteristics.
 - B. Have concentrations, in p.p.m., below the limit of analytical methods used.
5. Solutions have been analysed only for ions shown.

APPENDIX 5:

3rd August,

An. G & T/29/7

Report on Sample No. 847/64

Sample : Bore-hole Gas
 Locality : Port Campbell
 Sender : The Manager,
 Frome Broken Hill Co.Pty.Ltd.,
 99 Collins Street,
MELBOURNE.

Ferguson's Hill No.1

A sample of bore-hole gas was received for analysis. The gas was obtained during testing of the oil well, situated about eight miles east of Port Campbell.

Particulars of Sample.

Drilling Company	Frome-Broken Hill
Name of Well	Ferguson's Hill No.1.
Depth (feet)	5436 - 5464
Date	25th May 1964

Condition of Sample

The sample was received in a low pressure air cylinder and was under slight positive pressure.

Results:

The gas sample contained a fairly large percentage of air, considerably more than there was in another sample of gas from another, later, well (Port Campbell No.4, sampled 28.7.64).

As a matter of interest, the Ferguson's Hill sample was re-calculated on the basis of the same amount of air found in the Port Campbell No.4 gas.

The left-hand column below gives the analysis of gas as received, the middle column shows the results re-calculated to the basis of the same air content as the Port Campbell No.4 gas and the right-hand column shows, for comparison, the analysis of the gas obtained from the Port Campbell No.4 well.

OKZ.
 4/8/64

	847/64 As received	847/64 Same as basis as Port Campbell No.4	848/64 Port Campbell No.4
	% V/V	% V/V	% V/V
Methane	74.1	83.3	82.2
Ethane	6.0	6.7	6.6
Propane	2.2	2.5	3.6
Isobutane	0.74	0.83	1.07
n-Butane	0.51	0.57	1.22
Neopentane	0.015	0.017	0.018
Isopentane	0.32	0.36	0.49
n-Pentane	0.19	0.21	0.40
C ₆ and higher	0.73	0.82	1.47
Oxygen	2.8		0.7
Nitrogen	12.4		2.2

COMMENT

The gas from Ferguson's Hill No.8 is a petroliferous gas and is very similar in analysis to the gas obtained from a later well (Port Campbell No.4.)

* * * * *		
Total hardness (as CaCO ₃)		104

pH 8.7
 Resistivity (25°C. Ohm-cm.) 610

* This iron, insoluble when the oil levels are down, was probably all originally in solution as ferrous bicarbonate. However only the soluble iron figure has been used in the hypothetical calculation.

OLK
8/2/65

A hypothetical combination is given as follows :-

		<u>P.P.M.</u>
Calcium bicarbonate,	CaHCO ₃ 1/2	17
Magnesium bicarbonate,	MgHCO ₃ 1/2	311
Ferrous bicarbonate,	FeHCO ₃ 1/2	5
Potassium bicarbonate,	KHCO ₃	10
Sodium bicarbonate,	NaHCO ₃	716
Sodium carbonate,	Na ₂ CO ₃	42
Sodium sulphate,	Na ₂ SO ₄	16
Sodium chloride,	NaCl	326

Comments

The water contains nearly 0.1% of dissolved mineral matter and would be described as "moderately soft".

It could be used for human consumption if no better water were available and it would also be suitable for domestic washing purposes.

The water is extremely high in sodium compared with calcium and magnesium and this could cause undesirable changes in the clay structure of soils, if the water were consistently used for irrigation.

The water would be suitable for all stock and for flushing in a septic coverage system.

John C. Kennedy

Senior Chemist,
Water Department.
