PALYNOLOGY OF THE EASTERN  
OTWAY BASIN

S.J. TICKELL, C. ABELE  
& G.J. PARKER

Geological Survey of Victoria

Unpublished Report 1993/18

## INTRODUCTION

This compilation of the results of palynological investigations was begun by S. J. Tickell in 1989 as part of a geological study of the Port Campbell Embayment, later the eastern Otway Basin, by the Geological Survey of Victoria. It was extensively revised by C. Abele, with the help of G.J. Parker, in 1992 and 1993. Most of the data are from the Otway Basin east of longitude 142°30', including the Torquay Basin (Fig. 1). The locations of the boreholes listed in this compilation are shown in Fig. 2, except for Dunnawalla 9 (691500E 5805250N), Geelengla 10 (686400E 5792800N), South Caramut (629454E 5792650N), Woolsthorpe 1 (631141E 5778072N) and Wangoom 6 (628049E 5749021N).

The main emphasis has been on biostratigraphic zonation, but there are also comments on depositional environments and other matters. The spore-pollen zones are after Helby et al. (1987) for the Mesozoic and after Partridge (1976a) for the Tertiary (Fig. 3). Conclusions expressed in terms of other zonation schemes have been converted as accurately as possible to these two schemes. When several workers have investigated samples from the same bore intervals, generally the more recent conclusions are given here.

Some of the spore-pollen zone and rock unit identifications are doubtful as indicated by question marks added by earlier workers. Question marks in brackets were added during the compilation of these results where additional discrepancies were noted between spore-pollen zone and rock unit determinations.

For onshore oil exploration wells, kelly bushing is the datum for all depths listed whereas for government wells ground level is the datum. In the case of offshore wells, the depths are relative to the drill floor.

Rock units (Fig. 3) are denoted as follows:

- Tmi - Gellibrand Marl
- Ton - Narrawaturk Marl
- Ted - Demons Bluff Formation
- Tem1 - upper sand unit, Mepunga Formation
- Tem2 - Brucknell Member
- Tem3 - lower sand unit, Mepunga Formation
- Tem4 - Sturgess Point Member
- Tae - Eastern View Formation
- Tad - Dilwyn Formation
- Tad1 - Pember Mudstone
- Tap - Pebble Point Formation
- Tam - Moomowroong Sand and Wiridjil Gravel
- Kup - Paaratte Formation
- Kun - Nullawarre Greensand
- Kub - Belfast Mudstone
- Kuf - Flaxman Formation
- Kuw - Waarre Formation
- Kl - Eumeralla Formation
- Klh - Pretty Hill Formation
- Klc - Casterton Formation
