See Evans P.R. (1971) GI/40/80 for discussion of validity of SWC data in Bream-2. (A.D.P.)

COMMENTS: Dr P.R. Evans suspects that sidewall cores are incorrectly labled as correlation with Bream-3 is difficult with this data.

Note: If highest or lowest data is a 3 or 4, then an alternate 0, 1, 2 highest or lowest data will be filled in if control is available.

If a sample cannot be interpreted to be one zonule, as apart from the other, no entry should be made.

0 SWC or Core - Complete assemblage (very high confidence).
1 SWC or Core - Almost complete assemblage (high confidence).
2 SWC or Core - Close to zonule change but able to interpret (low confidence).
3 Cuttings - Complete assemblage (low confidence).
4 Cuttings - Incomplete assemblage, next to uninterpretable or SWC with depth suspicion (very low confidence).
