

Core Plug 13 (2904.23 m)

This shows a relatively limonite-poor and siderite-poor lithology with correspondingly large amounts of pores. Near the centre of the field of view are some fresh flakes of biotite, (B).

<i>Figure 9</i>	<i>Blackback 1 (Original Hole)</i>
Quartz	53%
Feldspar	1%
Glauconite	15%
Matrix Clay	19%
