

PLATE 3: 2437.4 m

Reflected Light

This coal is an exinite-rich duroclarite consisting chiefly of vitrinite (grey) and exinite (dark brown) with common inertinite (white).

Field Dimensions 0.26 mm x 0.18 mm

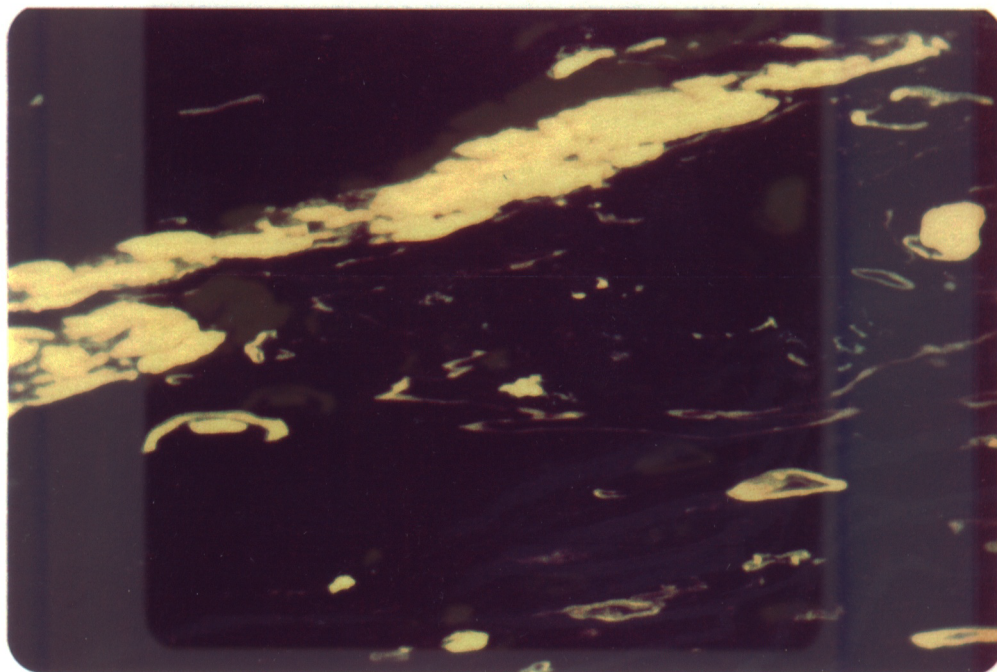

PLATE 4: 2427.4 m

Fluorescence Mode

This is the same field as Plate 3 illustrating the bright fluorescence of the resinite, cutinite, fluorinite and sporinite.
