Figure 5: GC333-5, Omeo-1, Core 2. Golden Beach Group quartz sandstone. Similar to GC333-3, but with higher proportion of orthoclase and unstable lithic grains. 1° porosity uncommon due to well developed veriform kaolinite pore fillings; 2° porosity due to K-feldspar dissolution. diagenetic pyrite common.
 A . Plane polarised light Width of field of view = 2.20 mm
 B . Crossed polarised light Width of field of view = 2.20 mm
