

Figure 7A White fluorescing oil inclusion on a healed fracture in detrital quartz. Sawbelly-1, 2890 m ctgs sample, dark field image under UV illumination (10 μm = 17.5 mm).

Figure 7B Same subject as 7A in transmitted light. The inclusion comprises a liquid phase and a small shrinkage bubble which develops in response to changes in temperature and pressure during sample retrieval. (10 μm = 17.5 mm).
