
NERITA-1

4/7

3010 - 3210
Inthd: At top:
- qz Slst, beige copt, hard, sharp break, (mic) silicified & dolomitised, (in part 50%) becoming Dol, beige copt, slt, microxln probably primary origine
Below 3050, Slst, beige brn copt, in part cl, mic, carb, dolomitic
10% of this element is brn-(red) siderific.
- C as above
- Clst, gy, beige, slt
- At base Qz S, xcrs, Pbl (ang) - (rnd), clear Qz, cl

3210-3332:
Dolomitised section with:
- Sst, beige-tan, copt, hd, ang srt Qz, (carb), (mic), (py), in a abd dol si matrix Thight. In part grading to s Dol.
- Slst, gy beige, copt, (carb)(PY)(mic) dol, in part brn ocre siderific
- Dol, lt brn, hd, mcrxln, slt, s, (carb), (mic), abd brn spots of probable Sid, grading to dol Slst.
No definite limit between Dol-Slt
- Minor C & crs Qz S as above.

3332-3615:
Mainly
Qz S, crs with peb passages until 3500, (ang)-(rnd), srt-srt, frequent aggregats of Qz Py cmt. interbedded with
- C, blk, in part shiny, brit, in part cl, dull, grading to:

- Clst, dk brn, earthy to silky, blky-(fis) carb, Plt, Rem, slt, becoming slt below 3480, grading to:
Slst, dk brn - dk beige, soft, fri, cl, carb, mic.

Below 3580 frequent presence of amber.

3615-3730:
Sst, wh-lt gy, f-occ med, ang-(ang) clear Qz, srt, (cons)-cons, in part carb & mic, (wheathered F) moderate to rare white kaolinite in a Cmt of Qz Slt & (Dol), (por)-por occasionally,
Interbedded with:
C dull blk, cl, in part s, Py,
Clst, dk brn, carb, slt, (fis)
Abd Py at 3670
3730-3905:
- Sst, wh-beige, cons, med-crs, ang-(rnd) clear Qz, (srt)-srt, (carb) minor dk gy Grn, (mic), (wheathered F), in a Cmt of qz Slt, in part cl, (dol), (por)-por.
Qz S, crs-crs, (ang)(rnd), srt, clear, minor yel, silky to (Fros). Presence of (interlocking) between Qz.
- Clst & C as above.

3905-4005:
Interbedded:
C, blk dull, cl
Clst, brn, fri, (fis), carb, slt grading to
Slst, brn, cl, carb, fri
Minor sst as above
