Mr Terry McKinley  
Manager Petroleum Regulation  
Department of Primary Industries, Minerals and Petroleum Regulation Branch  
1 Spring St, Melbourne  
Victoria, 3000

Dear Sir

RE : Details of Megascoldes 1 RE ST site modification requirement, PEP 162 / EL 4537

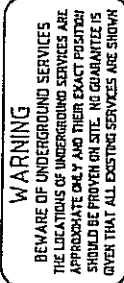

Because a different rig is being used for the re-entry of Megascoldes 1 and to enhance safety a number of modifications will be required to the site as well as re-instating some restored areas of the lease. Principally the upgrade and reinstatement work comprises:

1. Cutting approx 15m into the bank on the south eastern side of the lease to allow for positioning of flare pit 50 metres from hole centre. Also provides safer access to pipe racks on eastern side.
2. Installing a second site access on eastern side of lease (upper level) to provide safe truck access.
3. Filling the western side of lease by approx 10m to provide safe distance from hole centre for site shacks and room to work around rig external guys
4. Redigging waste drill fluid pit
5. Re-gravelling the lease
6. It may be necessary to cut about 5m into bank on northern side of lease to provide room for carrier to back in and mud storage area.
7. Relocate fencing at east of lease to east of new access track. Install new gate in southern fence

Changes have been discussed and agreed with the landowner Wayne Notman. They have also been reviewed and agreed with our HSE advisors.

Yours Faithfully

Lino Barro
