## DRILLING MORNING REPORT # 5 Basker 3 Workover

Well Data							
Country	Australia	M. Depth	0.00m	Cur. Hole	Size	AFE Cost	\$ 32256870
Permit	VIC/L26	TVD	0.00m	Casing OI	C	AFE No.	DMGOD209D22
Drill Co.	N/A - Ocean Patriot	Progress	0.0m	Shoe TVD	)	Daily Cost	\$ 895241
Rig	Ocean Patriot	Days from spud		FIT		Cum Cost	\$ 4697652
Wtr Dpth(MSL)	152.90m	Days on well	4.60	LOT		Planned TD	
RT-ASL(MSL)	21.50m	Lat	38 ° 17 ' 58.972 " S	Long	148°42'24.873"E	Datum	GDA94
RT-ML	174.40m	Current Op @ 060			ice line connection. line. Stuck at 234m.		
		Planned Op	Bullhead tu	bing with 1.	03 sg filtered brine. Circ	culate gas out of	annulus via FPSO.

#### Summary of Period 0000 to 2400 Hrs

Attempted to bleed of annulus via well test choke manifold. Well test pressure relief valve lifted due to blockage from icing up. Shut well in. Stripped and inspected relief valve. Pressure tested relief valve, good test. Pumped 1.59 m3 (10 bbls) down annulus with cement unit. Closed AMV and bled down pressure via well test manifold. Closed AAV, bled down THP via well test choke manifold. Laid out slick line brush toolstring and made up SSD shifting tool string. Reduced filtered brine weight from 1.08 sg to 1.03 sg. ROV released well service line plug from SST. Recovered well service line plug to surface. Ran SSD shifting tool on slick line, unable to pass SSSV. ROV concurrently installing well service line on SST.

#### Operations For Period 0000 Hrs to 2400 Hrs on 23 Jun 2009

Phse	Cls (RC)	Ор	From	То	Hrs	Depth	Activity Description
PROD	Ρ	KILL	0000	0300	3.00	0.0m	Attempted to bleed off annulus pressure via test choke manifold, surge tank and overboard vent line. THP 0.97 MPa (140 psi) - Annulus pressure 16.89 MPa (2450 psi). THP increased to 1.59 MPa (230 psi), pumped 0.79 m3 (5 bbls) down tubing. Annulus pressure not dropping and gas being bled back at surface. Lined up to annulus and pumped 1.91 m3 (12 bbls) into annulus at 317 lts/min (2 bbl/min) at 18.89 MPa (2740 psi) shut down pump. Annulus pressure 15.17 MPa (2200 psi) and THP 2.76 MPa (400 psi). Attempted to bleed off tubing pressure, unsuccessful.
PROD	TP	KILL	0300	0600	3.00	0.0m	THP at 450 psi. Continued to pump a total 3.18 m3 (20 bbls) into annulus at 317 lts/min (2 bbls/min) at 18.90 MPa (2740 psi). Shut in Pump and lined annulus back up to choke manifold. Attempted to bleed annulus pressure down again. Annulus pressure at 16.89 MPa (2450 psi) with gas at surface. Well test pressure relief valve lifted due to blockage from icing up. Shut in well and bled off pressure.
PROD	TP	KILL	0600	0800	2.00	0.0m	Monitored annulus pressure 17.24 MPa (2500psi) and THP 7.10 MPa (1030 psi) Note: Unable to bleed off annulus pressure conventionally due to excessive gas in annulus. Developed alternative plan to remove gas from annulus.
PROD	TP	KILL	0800	1100	3.00	0.0m	Isolated both tubing and annulus. Flushed through surface lines with cement unit. Pressure tested relief valve on test choke manifold 3.45/6.89 MPa (500/1000psi) for 5/10 min. Well testers observed o-ring stuck in relief valve (not o-ring from plug). Removed relief valve from manifold and removed o-ring. Installed relief valve and pressure test connections to 3.45/6.89 MPa (500/1000psi) for 5/10 min.
							Concurrent operations: Prepared well kill procedures using FPSO to bleed off annulus pressure.
PROD	TP	KILL	1100	1130	0.50	0.0m	Cement unit applied 18.61 MPa (2700 psi) to annulus lo torq valve, equalized pressure and opened lo torq valve. Observed annulus pressure at 17.24 MPa (2500 psi). Cement unit pumped 1.59 m3 (10 bbls) of 1.08 sg brine down annulus at 318 lts/min (2bbsl/min) with (2600 psi)17.92 MPa. Stopped pumping and closed AMV.
							Concurrent operations: Prepared well kill procedures using FPSO to bleed off annulus pressure.
PROD	TP	KILL	1130	1330	2.00	0.0m	Bled down pressure from AMV via annulus access line through well test manifold, initial pressure 17.24 MPa (2500psi) down to 0.07 MPa (10 psi).
							Concurrent operations: Prepared well kill procedures using FPSO to bleed off annulus pressure.
PROD	Р	KILL	1330	1430	1.00	0.0m	Closed AAV, applied 9.65 MPa (1400 psi) and opened lo torq valve to tubing with THP at 8.62 MPa (1250 psi), closed PSV. Bled down THP to well test choke.
							Concurrent operations: Prepared well kill procedures using FPSO to bleed off annulus pressure.
PROD	Ρ	KILL	1430	1500	0.50	0.0m	Closed WOV, broke out in-situ sub on lubricator and laid out brushes. Made up SSD shifting tool string and installed in lubricator. Made up in-situ sub lubricator connection and pressure tested same to 27.58 MPa (4000 psi), good test.

Phse	Cls (RC)	Ор	From	То	Hrs	Depth	Activity Description
							Concurrent operations: Prepared well kill procedures using FPSO to bleed off annulus pressure.
PROD	TP	KILL	1500	1600	1.00	0.0m	Reduced filtered brine from 1.08 sg to 1.03 sg. ROV jumped at 15:50 hrs.
							Concurrent operation: Prepared well kill procedures using FPSO to bleed off annulus pressure.
PROD	TP	KILL	1600	1900	3.00	0.0m	ROV released 50.8mm (2") well service line plug. Recovered well service line plug to surface with pod line winch.
							Concurrent operations: Prepared well kill procedures using FPSO to bleed off annulus pressure.
PROD	TP	KILL	1900	2100	2.00	0.0m	Flushed through well service line with 1.91 m3 (12 bbl) at 317.5 lts/min (2bbl/min) using rig pump. ROV commenced installing 50.8mm (2") well service line on SST.
							Concurrent operations: Prepared well kill procedures using FPSO to bleed off annulus pressure.
PROD	TP	KILL	2100	2200	1.00	0.0m	ROV on deck. ROV checked integrity of torq tool. ROV jumped at 21:45 hrs.
							Concurrent operations: Prepared well kill procedures using FPSO to bleed off annulus pressure.
PROD	TP	KILL	2200	2300	1.00	0.0m	ROV continued installation of 50.8mm (2") well service line on SST.
							Concurrent operations: Prepared well kill procedures using FPSO to bleed off annulus pressure.
PROD	TP	SLIK	2300	2400	1.00	0.0m	Opened WOV and applied 17.24 MPa (2500psi) on PSV. Opened PSV, observed pressure drop to 8.48 MPa (1230 psi). Ran in hole with SSD shifting tool string to 234 m, tagged up at SSSV. Attempted to work through same, unsuccessful.
							Concurrent operations: Prepared well kill procedures using FPSO to bleed off annulus pressure.
							ROV continued installing 50.8mm (2") WSL on SST.
•							n 24 Jun 2009
Phse	Cls (RC)	Ор	From	То	Hrs	Depth	Activity Description
PROD	TP	SLIK	0000	0030	0.50	0.0m	Pulled out of hole with SSD shifting tool on slick line.

	$(\mathbf{R}\mathbf{C})$						
PROD	TP	SLIK	0000	0030	0.50	0.0m	Pulled out of hole with SSD shifting tool on slick line.
							Concurrent operations: Prepared well kill procedures using FPSO to bleed off annulus pressure. ROV installing well service line on SST.
PROD	TP	SLIK	0030	0100	0.50	0.0m	Closed PSV, bled off pressure via well test choke manifold. Closed WOV.
							Concurrent operations: Prepared well kill procedures using FPSO to bleed off annulus pressure. ROV installing well service line on SST.
PROD	TP	SLIK	0100	0200	1.00	0.0m	Broke out in-situ sub connection on lubricator. Lowered SSD shifting tool string to drill floor. Inspected and calipered shifting tool, tool appeared fully functional with no obvious defects. Installed SSD shifting tool in lubricator. Made up in-situ sub connection on lubricator and tested same to 27.58 MPa (4000 psi), good test. Opened tubing lo torq valve and WOV. Applied 8.96 MPa (1300 psi) on PSV, opened PSV.
							Concurrent operation: Prepared well kill procedures using FPSO to bleed off annulus pressure. ROV completed re-installation of WSL on SST 01:22 hrs and prepared for WSL test.
PROD	Ρ	SLIK	0200	0330	1.50	0.0m	Ran in hole with SSD shifting tool on slick line to SSD at 3507 m. Opened SSD, jarred down 9 times and passed through 3 times. Note: Observed slight weight loss passing through SSSV at 234 m.
							Concurrent operations: Prepared well kill procedures using FPSO to bleed off annulus pressure. Prepared for WSL test. At 03:00 hrs isolated THP at 8.96 MPa (1300 psi) and bled down surface lines via well
							test choke manifold.
PROD	Р	SLIK	0330	0500	1.50	0.0m	Pulled out of hole with SSD shifting tool on slick line, stopped at 231 m.
							Concurrent operations: Prepared well kill procedures using FPSO to bleed off annulus pressure. Commenced well service line test at 03:36 hrs.
PROD	TP	SLIK	0500	0600	1.00	0.0m	Attempted to get movement on slick line, unsuccessful. Rigged up gauge on lubricator to get THP reading. Troubleshoot problem.
